

Detect and Combat Today's **Advanced Security** Threats

ATTACK SURFACES ARE EXPANDING, ARE YOU READY?

Zivaro brings 20 years of experience working with hundreds of regulated market customers in a multitude of vertical markets to combat today's most critical Information Security threats.

We help clients build secure, reliable IT platforms that protect intellectual property, brand, applications and sensitive data - aligning to and helping you mature your enterprise architecture efforts. These capabilities help form a reliable foundation upon which mission critical systems and applications can depend upon.

Zivaro team members continually achieve and update both vendor-specific and vendor-agnostic information security certifications from our top tier partners including Cisco, Splunk, Palo Alto Networks and (ISC)2. This enables Zivaro's security practitioners to provide current, knowledgeable and efficient execution of our clients' most-challenging Information Security projects.

Security Program Strategy & Analysis

Endpoint Security

Identity and Access Management

Security Information & Event Management (SIEM)

Security Operations & Visibility

Network Security

Physical Security Services

Security Orchestration Automation & Response (SOAR)

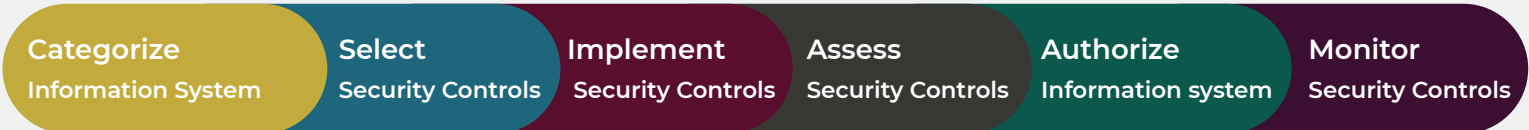

Providing **successful security outcomes** for over two decades

Zivaro has provided successful security outcomes for our customers spanning the Fortune 1000 and commercial firms, to state and local governments and Department of Defense and federal agencies. Our differentiation and value IS this diverse experience to leverage in aiding you in advancing your security posture.

Department of Defense Risk Management Framework (RFM)

Zivaro's vast and differentiated experience benchmarks our client's needs against accepted methodologies maintained by the National Institute of Standards and Technology (NIST) and follow the Risk Management Framework (RFM) methodology common with the federal government.

Enterprise Cybersecurity Framework (CSF)

Zivaro adhere's to the Cybersecurity Framework (CSF). CSF is a framework for computer security guidance for how private sector organizations can assess and improve their ability to prevent, detect, respond to and recover from cyber-attacks.
